Windows 10 (32/64 bit)
Windows 2008 R2 (64 bit)
Windows 2012 Server
Windows 2016 Server

MEMORY

4 GB RAM

DISK SPACE

700 MB hard disk space

Despite the introduction of many new communication technology over the last decade such as social media, mobile messaging etc, email remains the backbone of corporate communications.

As it continues to be the most important method of digital business communication, it has become a target of cyber criminals:

- Email continues to be the preferred method for spreading virus and spam.
- Everyday many new types of phishing mails try to fool users in giving away sensitive data.
- Also on the rise are payment related frauds resulted from business email accounts being hacked
- Email communications are being intercepted to gain valuable data.

With MailNow! 6, InternetNow continues to innovate our award-winning mail server software to ensure that you take control of your organization email communication without the dreaded complexity and high maintenance costs.

WHAT IS MAILNOW!

MailNow! is a mail server software. Such software is used for creating email accounts and storing the mailboxes of an organization. It receives incoming mails and sends out outgoing mails on behalf of the users.

Most emails users are familiar with email clients (e.g. Microsoft Outlook or web-based email). But these software need have a mail server running in the background in order to work.

MailNow is a Windows- based mail server first developed in 1999.

Today in its 6th iteration, it is relied by thousands of organizations in Malaysia and across the world to ensure their emails are safe and reliable.

WHY MAILNOW!

COST EFFECTIVE

It is unbelievably low cost. It costs a lot less compared to similar products from big names such as Microsoft and IBM. The license is perpetual meaning that you are not forced to pay any renewal fees. Compared to cloud-based email solution, it is much cheaper to run in the longer term.

Pricing is in Ringgit Malaysia, therefore it is not subject to currency fluctuation (which affects many of the cloud-based solutions).

It also does not need to run on the server edition of Windows. The desktop versions (such as Windows 10) are also supported. Even if you run on Windows Server, you do not have to purchase the expensive Client Access License (CAL). It also does not need any special database software such as Microsoft SQL Server.

DATA PRIVACY

The recent disclosures by governmental whistleblowers expose a worrying reality: many email systems hosted by third parties are pried upon by various agencies. The emails are intercepted and accessed without the users' knowledge.

There is also the risk of emails being accessed by cyber criminals.

By having your own on-premise email server running MailNow!, you can take control of your organization's emails again. You determine how the emails are stored, where they are stored and who have access to them.

EASE OF MIND

MailNow! is a no-frills email server. It is simple to install and manage. It runs on Windows (and not the more technically challenging Linux).

All data and configuration are stored in flat files. It does not rely on any advanced database server. This means it is easy to backup the data (as well as restoring them should something happen).

Being a home-grown product, you can get support directly from the developers. InternetNow are the leading email experts in Malaysia with over 17 years experience developing and implementing email systems.

WHAT'S NEW IN MAILNOW! 6
